

## Cloud(AWS) Week 1 Task:

### TASK-2 Microservices

🔑 Prerequisites: Make sure you have a free-tier AWS account set up.

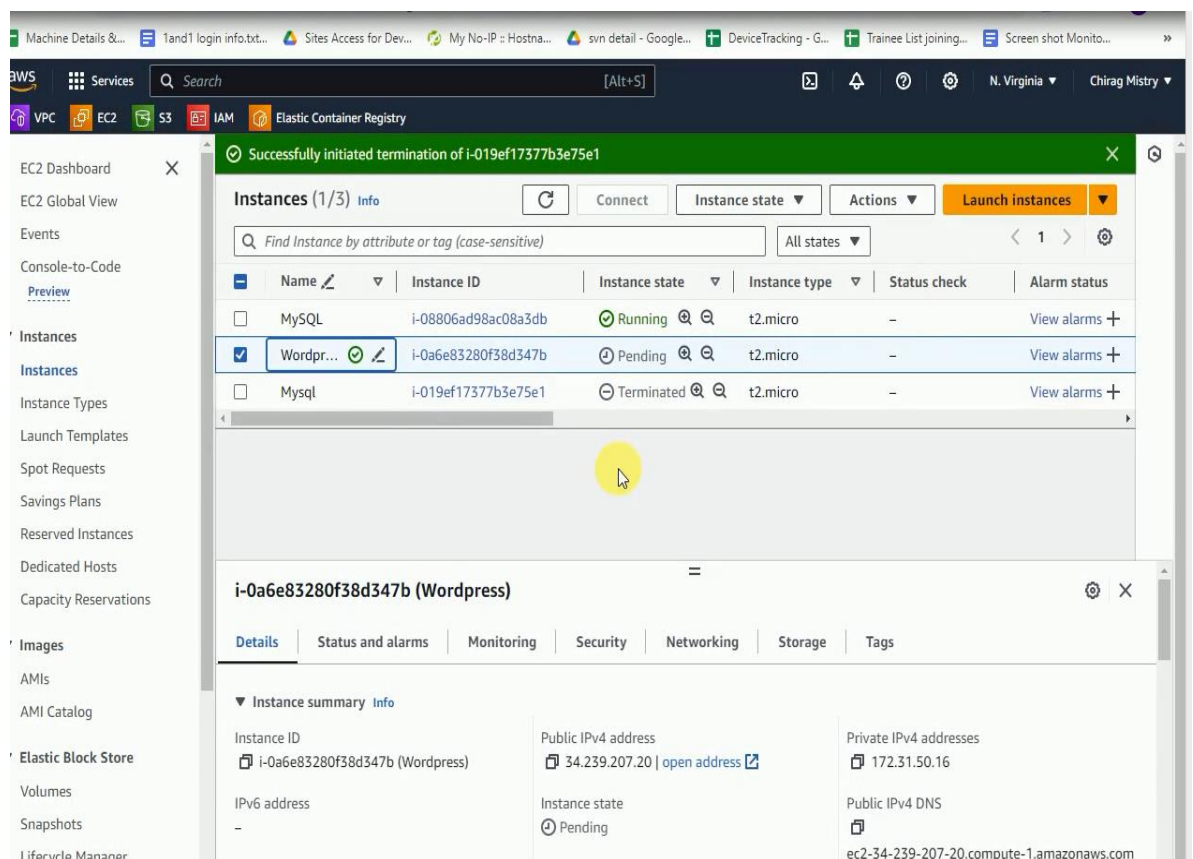

🛠️ Task: Deploy WordPress and MYSQL applications within a Microservices architecture.

📖 Description: In this tutorial, we'll set up a Microservices architecture using an EC2 instance on AWS. Our goal is to deploy WordPress and MYSQL on separate EC2 instances and create a welcome page like WELCOME TO TECHPLEMENT! in WordPress Homepage.

Steps:-

- **FOR WORDPRESS SERVER**

1. Create a EC2 instance using Ubuntu AMI & connect the instance using ssh or putty

2. `sudo su -`

3. `apt update -y`

4. `apt install apache2 php php-mysql libapache2-mod-php -y`

```

root@ip-172-31-50-16:/home/ubuntu# apt install apache2 mysql-server php php-mysql libapache2-mod-php -y
Reading package lists... Done
Building dependency tree... Done
Reading state information... Done
The following additional packages will be installed:
  apache2-bin apache2-data apache2-utils libapache2-mod-php8.3 libapr1t64 libaprutil1-dbd-sqlite3 libaprutil1-ldap libaprutil1t64
  libbcbi-fast-perl libbcbi-pm-perl libclone-perl libencode-locale-perl libevent-pthreads-2.1-7t64 libfcgi-bin libfcgi-perl libfcgi0t64
  libhtml-parser-perl libhtml-tagset-perl libhtml-template-perl libhttp-date-perl libhttp-message-perl libio-html-perl liblua5.4-0
  liblwp-mediatypes-perl libmecab2 libprotobuf-lite32t64 libtimedate-perl liburi-perl liburi-perl mecab-ipadic mecab-ipadic-utf8 mecab-utils
  mysql-client-8.0 mysql-client-core-8.0 mysql-common mysql-server-8.0 mysql-server-core-8.0 php-common php8.3 php8.3-cli
  php8.3-common php8.3-mysql php8.3-opcache php8.3-readline ssl-cert
Suggested packages:
  apache2-doc apache2-suexec-pristine | apache2-suexec-custom www-browser php-pear libdata-dump-perl libipc-sharedcache-perl
  libio-compress-brotli-perl libbusiness-isbn-perl libregexp-ipv6-perl libwww-perl mailx tinyc

```

5. wget <https://wordpress.org/latest.tar.gz>

6. tar -xvf latest.tar.gz

```

root@ip-172-31-50-16:/home/ubuntu# systemctl status apache2
● apache2.service - The Apache HTTP Server
   Loaded: loaded (/usr/lib/systemd/system/apache2.service; enabled; preset: enabled)

i-08806ad98ac08a3db (MySQL)

```
root@ip-172-31-55-99:/home/ubuntu# sudo mysql
Welcome to the MySQL monitor.  Commands end with ; or \g.
Your MySQL connection id is 8
Server version: 8.0.39-0ubuntu0.24.04.1 (Ubuntu)

Copyright (c) 2000, 2024, Oracle and/or its affiliates.

Oracle is a registered trademark of Oracle Corporation and/or its
affiliates. Other names may be trademarks of their respective
owners.

Type 'help;' or '\h' for help. Type '\c' to clear the current input statement.

mysql> create database chirag;
ERROR 1064 (42000): You have an error in your SQL syntax; check the manual that corresponds to your MySQL server version for the right s
yntax to use near 'databse chirag' at line 1
mysql> create database chirag;
Query OK, 1 row affected (0.02 sec)

mysql> crate user 'chirag'@'%' identified by 'chirag@123';
ERROR 1064 (42000): You have an error in your SQL syntax; check the manual that corresponds to your MySQL server version for the right s
yntax to use near 'crate user 'chirag'@'%' identified by 'chirag@123'' at line 1
mysql> create user 'chirag'@'%' identified by 'chirag@123';
Query OK, 0 rows affected (0.03 sec)

mysql> grant all privileges on chirag.* to 'chirag'@'%;
Query OK, 0 rows affected (0.01 sec)

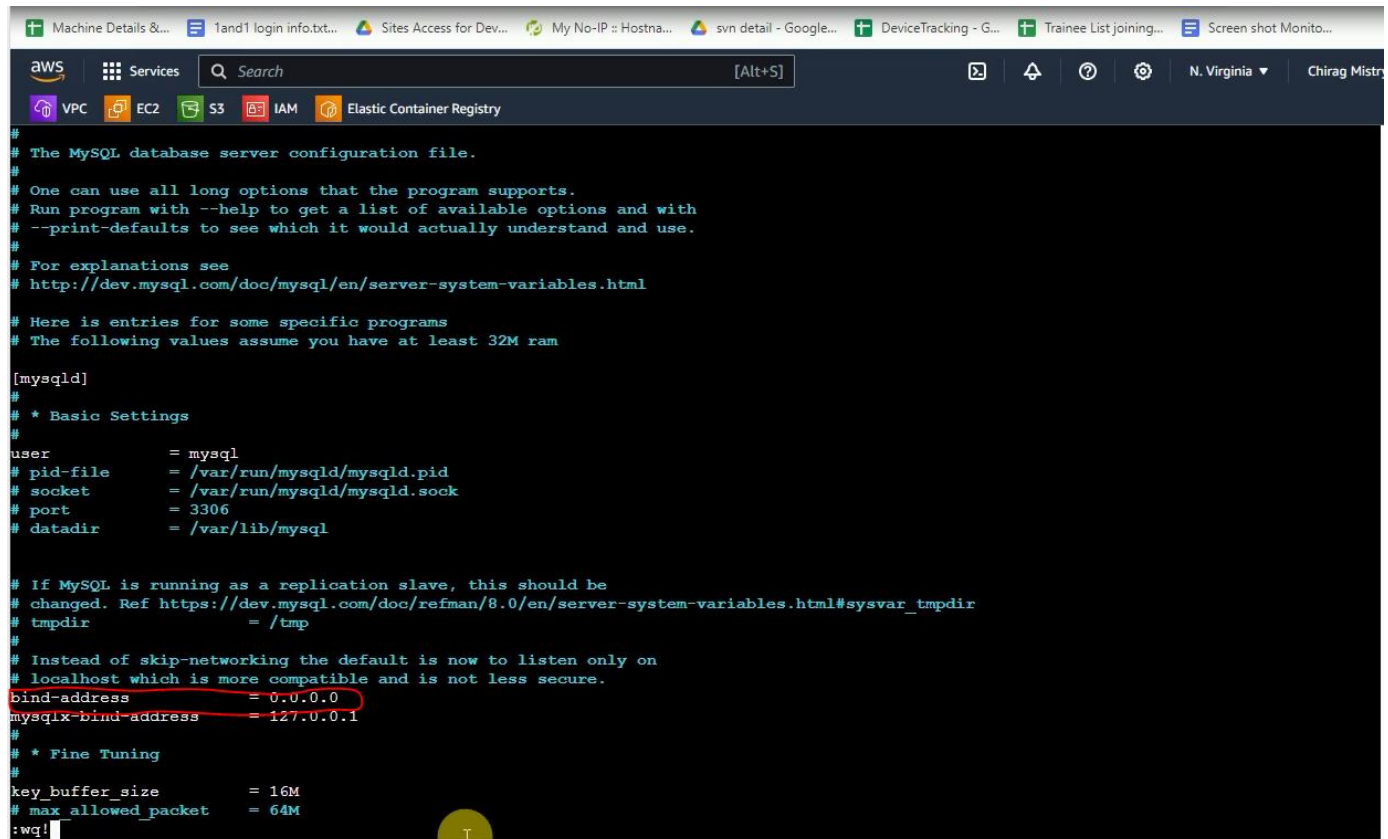

mysql> flush privileges;
Query OK, 0 rows affected (0.00 sec)

mysql> exit
Bye
```

After successfully installed and created database we must need to change the ip using bellow command

11. `sudo vi /etc/mysql/mysql.conf.d/mysqld.cnf`

```
root@ip-172-31-55-99:/home/ubuntu# vi /etc/mysql/mysql.conf.d/mysqld.cnf
```

```
# The MySQL database server configuration file.
#
# One can use all long options that the program supports.
# Run program with --help to get a list of available options and with
# --print-defaults to see which it would actually understand and use.
#
# For explanations see
# http://dev.mysql.com/doc/mysql/en/server-system-variables.html
#
# Here is entries for some specific programs
# The following values assume you have at least 32M ram

[mysqld]
#
# * Basic Settings
#
user                = mysql
# pid-file           = /var/run/mysqld/mysqld.pid
# socket             = /var/run/mysqld/mysqld.sock
# port               = 3306
# datadir            = /var/lib/mysql

# If MySQL is running as a replication slave, this should be
# changed. Ref https://dev.mysql.com/doc/refman/8.0/en/server-system-variables.html#sysvar_tmpdir
# tmpdir             = /tmp

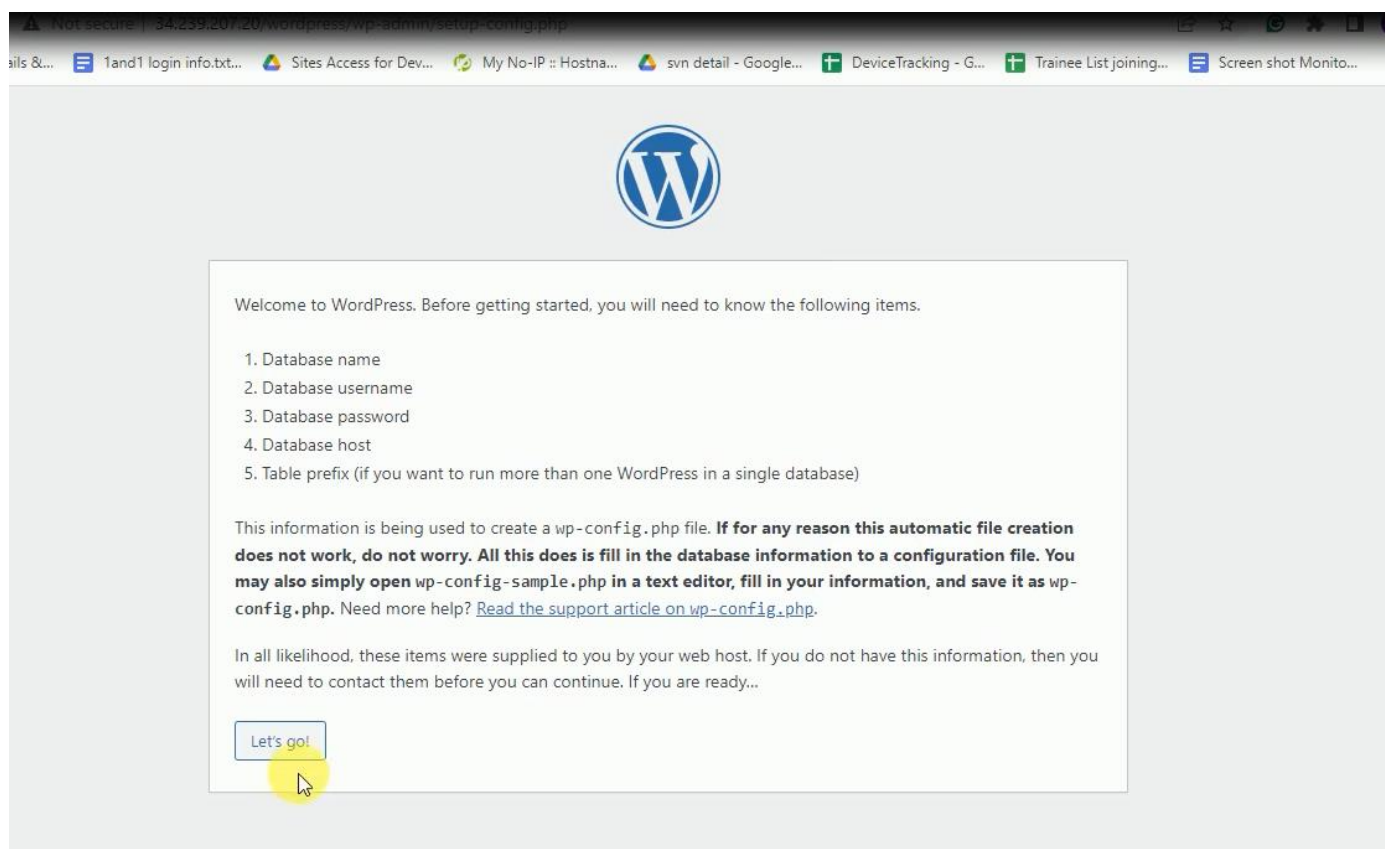

# Instead of skip-networking the default is now to listen only on
# localhost which is more compatible and is not less secure.
bind-address         = 0.0.0.0
mysqldx-bind-address = 127.0.0.1
#
# * Fine Tuning
#
key_buffer_size      = 16M
# max_allowed_packet = 64M
:wd!
```

12. `sudo systemctl restart mysql`

13. `sudo systemctl status mysql`

After successfully installed both wordpress and mysql server now we are trying to login wordpress page using wordpress server public ip

In Database host section we need to give MYSQL Server Private IP.

Machine Details &... 1and1 login info.txt... Sites Access for Dev... My No-IP :: Hostna... svn detail - Google... DeviceTracking - G... Trainee List joining... Screen shot Monito... »

Below you should enter your database connection details. If you are not sure about these, contact your host.

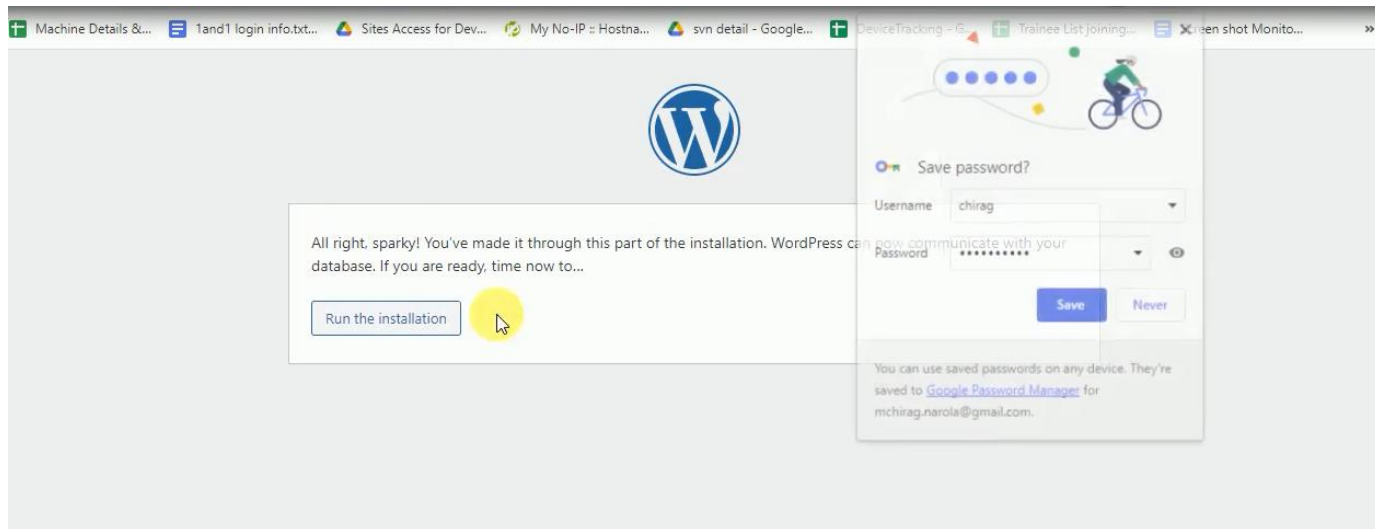

**Database Name**   
The name of the database you want to use with WordPress.

**Username**   
Your database username.

**Password**  [Hide](#)  
Your database password.

**Database Host**   
You should be able to get this info from your web host, if localhost does not work.

**Table Prefix**   
If you want to run multiple WordPress installations in a single database, change this.

# Welcome

Welcome to the famous five-minute WordPress installation process! Just fill in the information below and you'll be on your way to using the most extendable and powerful personal publishing platform in the world.

## Information needed

Please provide the following information. Do not worry, you can always change these settings later.

**Site Title**

**Username**   
Usernames can have only alphanumeric characters, spaces, underscores, hyphens, periods, and the @ symbol.

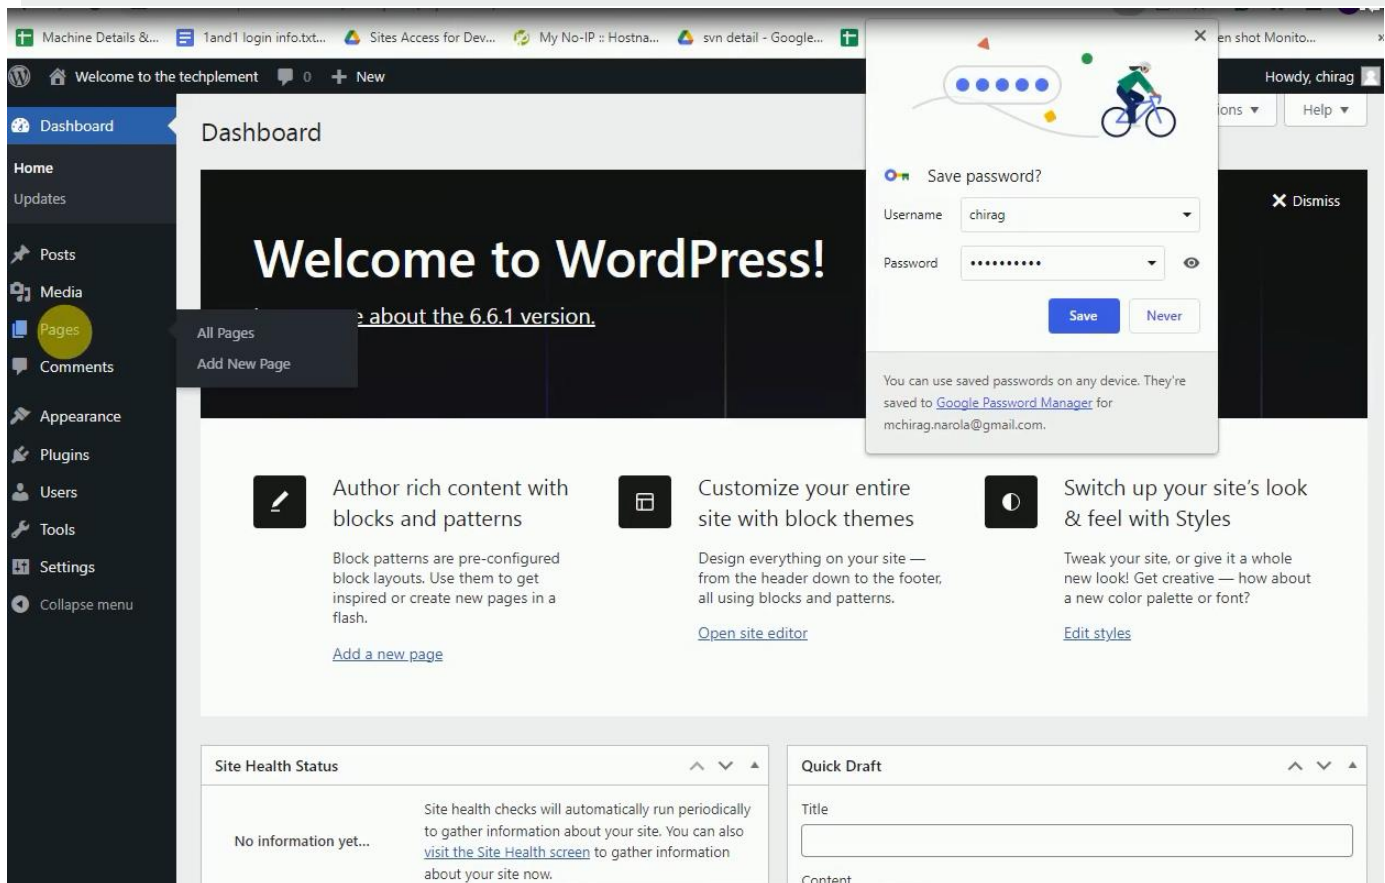

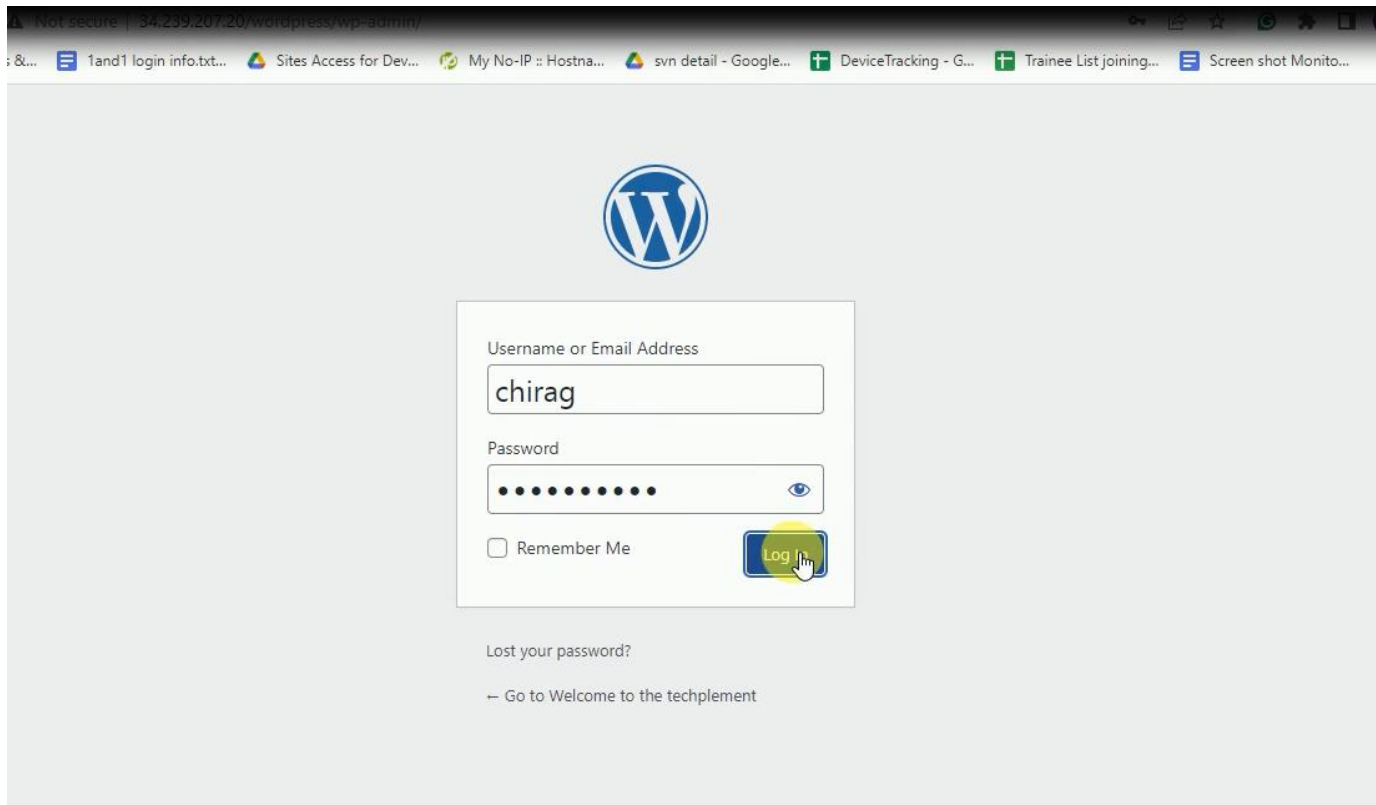

**Password**  [Hide](#)  
**Weak**

**Important:** You will need this password to log in. Please store it in a secure location.

**Confirm Password** ☒ Confirm use of weak password

**Your Email**   
Double-check your email address before continuing.

**Search engine visibility** ☐ Discourage search engines from indexing this site
